

U-Probe Tip Angle and Distance to First Electrode Site

U-Probe with 30° tip angle has a 500µm distance to first recording site

U-Probe with 60° tip angle has a 200µm distance to first recording site

U-Probe with rounded tip has a 180 µm distance to first recording site.
This type of probe is good for penetrations where keeping blood vessels intact is important.
